

Gaston Elian Bujia

Data Scientist | Machine Learning | Predictive Modeling | Python | Computational Statistics

Buenos Aires, Argentina | gastonbujia@gmail.com | LinkedIn | GitHub

Data Scientist with a strong background in mathematics, machine learning, and applied research. I combine hands-on experience building and shipping predictive models, including a production-deployed clinical scoring system, with doctoral training in computational modeling, Bayesian methods, and deep learning. I am especially interested in roles where rigorous quantitative thinking, Python-based analysis, and clear communication can turn complex data into actionable decisions.

Relevant Experience

Research Data Scientist | **Everything ALS** | *March 2024 - Present*

- Developed a production-deployed dysarthria severity scoring model using Whisper, PyTorch, and scikit-learn, integrated into clinical trial workflows. Built predictive models using accelerometer and voice signals for ALS disease progression monitoring.
- Applied survival analysis and collaborated with clinical scientists to translate research questions into ML solutions for complex clinical datasets.

Graduate Researcher | **Applied Artificial Intelligence Lab (UBA-CONICET)** | *2018 - 2026*

- Designed and evaluated end-to-end ML pipelines for predicting sequential human behavior from experimental datasets, combining deep learning, Bayesian modeling, CNN-based saliency models, and reproducible workflows.
 - Contributed to **ViSioNS** (NeurIPS 2022) and developed **sIBS**, published in *Frontiers in Systems Neuroscience*, for evaluating computational models of visual search.
-

Key Projects

- **Dysarthria scoring model (Everything ALS):** Production-deployed clinical NLP/audio model built with Whisper, PyTorch, and scikit-learn.
 - **ViSioNS (NeurIPS 2022):** Open-source benchmark for computational models of human visual search, adopted by the research community.
-

Education

- **Ph.D. in Computer Science**, UBA (2018 - 2026). Computational modeling, Bayesian methods, visual search.
 - **B.Sc. in Mathematics**, UBA (2018). Recommendation systems, Factorization Machines, cold-start.
-

Teaching & Publications

- **Teaching:** Machine Learning and Computational Statistics at UBA; graduate ML teaching in the Data Mining and Knowledge Discovery master's program of the Department of Computer Science, FCEN-UBA.
- **Mentoring:** undergraduate thesis co-supervision and research mentorship in computational modeling and behavioral data.
- **Publications:** Several publications in peer-reviewed scientific journals and conferences, including Scientific Reports, NeurIPS, and Frontiers in Systems Neuroscience.
